SUMMARY

Software Engineer with 3 years of experience building scalable distributed systems and microservices using Go, Python, and Java. Designed high-throughput REST and gRPC APIs, optimized PostgreSQL under production workloads and shipped AWS cloud-native solutions across logistics, fintech and media domains. Comfortable across the full backend lifecycle from greenfield service design to production debugging with hands-on experience in real-time systems, automated pipelines and cloud infrastructure.

TECHNICAL SKILLS

Languages: Python, Go (Golang), Java, JavaScript, TypeScript, HTML/CSS

Frameworks: FastAPI, Gin, Spring Boot, React.js, Next.js, Node.js, Express

Databases: PostgreSQL, MongoDB, Redis

Cloud & Infra: AWS (Lambda, S3, RDS, EC2, SQS), Docker, Kubernetes, Nginx

Tools & API: Git, GitHub Actions, REST, gRPC, WebSockets, Pub/Sub, JWT, GORM, Jira

EXPERIENCE

Holiday Channel, LLC

May 2025 – August 2025

Software Engineer Intern

Colorado, US

- Engineered a serverless AWS Lambda pipeline with custom rule-based tagging logic to autonomously classify 30,000+ recipes, eliminating an estimated 30 hours of weekly editorial effort.
- Automated bulk ingestion of 3,000+ media assets into Amazon S3 via custom scripting with synchronized PostgreSQL metadata updates.
- Delivered production-grade FastAPI REST APIs with authentication, Redis caching and paginated filtering for serving recipes and tagging data with reduced latency.

Wiz Freight

March 2022 – July 2024

Software Development Engineer (Intern → Full-time)

India

- Reduced quote turnaround time from 4 hours to under a minute by building an automated pricing engine that applied weekly rate feeds to generate customer-ready shipment quotes.
- Drove an 80% reduction in dashboard API latency by parallelizing query execution using Go goroutines and mutex-synchronized aggregation, while eliminating PostgreSQL bottlenecks through JSONB decomposition, indexing and pushdown optimizations.
- Delivered core backend features for a greenfield SaaS launch by creating onboarding flows, quote-to-booking pipelines, SSE-based live dashboards and SQS-driven transactional email triggers enabling Elyxer to onboard its first wave of customers.
- Built customer-facing RESTful APIs and internal gRPC services with Protobuf defined contracts using Go's Gin web framework and GORM enabling efficient communication between frontend applications and backend microservices.
- Diagnosed and optimized slow PostgreSQL queries through index tuning and query restructuring, reducing average API response time by 25% and improving backend throughput across core service endpoints.

HighRadius

May 2021 – July 2021

Data Analyst Intern

India

- Built and optimized an invoice payment deadline prediction model using logistic regression and decision trees, achieving 90% accuracy on historical transaction data to improve financial forecasting for B2C clients.
- Automated end-to-end data preprocessing and exploratory analysis across thousands of transactions using Pandas, NumPy, and Scikit-learn cutting manual feature engineering effort and accelerating model iteration cycles.

PROJECTS

Expensely – Expense Tracking and Management Tool | *Next.js, Java, PostgreSQL, AWS*

June 2025

- Built a production-grade full-stack expense management platform featuring JWT authentication, multi-category budgeting, income tracking, recurring expense automation, and an admin dashboard for user and financial oversight.
- Engineered a dual-channel alerting system using WebSockets for real-time overspending alerts and automated email reminders for budget expiry proactively surfacing budget insights and reducing unnoticed overspending.

EDUCATION

University at Buffalo

August 2024 – February 2026

Master of Science in Computer Science, GPA - 3.78 / 4

USA

SRM University

May 2018 – May 2022

Bachelor of Technology in Computer Science, CGPA - 9.67 / 10

India
